Задания лабораторной:

1. Скрипт с подключением к БД и несколькими запросами.
2. Набор классов вашей предметной области с привязкой к СУБД (класс должен уметь хотя бы получать нужные записи из БД и преобразовывать их в объекты этого класса)
3. Модели вашей предметной области
4. View для отображения списка ваших сущностей

1)

```
from mysql import connector
connection = connector.connect(user='root', password='root', host='127.0.0.1', database='1db')
def save(id, name, age):
    id = id
    name = name
    age = age
    c = connection.cursor()
    c.execute("INSERT INTO users (id, name, age) VALUES (%s,%s,%s)", (id, name, age))
    connection.commit()
    c.close()

try:
    c = connection.cursor()
    c.execute("SELECT * from users;")
    take = c.fetchall()
    for e in take:
        print(e)
    c.execute("SELECT name from users WHERE age>=20;")
    take = c.fetchall()
    for e in take:
        print(e[0])
    pass
finally:
    connection.close()
```

2)

```
from mysql import connector
class conn():
    def __init__(self):
        self.connection = connector.connect(user='root', password='root', host='127.0.0.1', database='1db')
    def spisok_id(self):
        c = self.connection.cursor()
        c.execute("SELECT id from users;")
        return (c.fetchall())
    def spisok_all(self):
        c = self.connection.cursor()
        c.execute("SELECT * from users;")
        return (c.fetchall())
    def age(self, id):
        self.id = int(id)
        c = self.connection.cursor()
        c.execute("SELECT name, age from users WHERE id = %s" % self.id)
        return (c.fetchall())

class add:
    def __init__(self):
        self.connection = connector.connect(user='root', password='root', host='127.0.0.1', database='1db')
    def save(self, id, name, age):
        self.id = id
        self.name = name
        self.age = age
        c = self.connection.cursor()
        c.execute("INSERT INTO users (id, name, age) VALUES (%s,%s,%s)", (self.id, self.name, self.age))
        self.connection.commit()
        c.close()
```

PEP 8: indentation contains tabs

 Platform and Plugin Updates  
PyCharm is ready to [update](#).

3)

```
from django.db import models
from django.utils import timezone

class Post(models.Model):
    author = models.ForeignKey('auth.User')
    title = models.CharField(max_length=200)
    text = models.TextField()
    created_date = models.DateTimeField(
        default=timezone.now)
    published_date = models.DateTimeField(
        blank=True, null=True)

    def publish(self):
        self.published_date = timezone.now()
        self.save()

    def __str__(self):
        return self.title # Create your models here.

class Man(models.Model):
    id = models.IntegerField(primary_key=True)
    name = models.CharField(max_length=200)
    age = models.IntegerField()
```

4)

```
